

SRP PROJECT of the MONTH

FORT PICKETT FIRE STATION ADDITION & RENOVATION

The Fire Station at Fort Pickett in Blackstone Virginia was recently renovated to provide additional sleeping quarters, a renovated Kitchen, two new Vehicle bays, and to provide new HVAC equipment including Air Handling Units and a new Boiler. The vehicle Bays were equipped with custom air filtration units to remove carbon monoxide generated by the exhaust of the vehicles entering and leaving the bays. The existing sleeping quarters and restroom facilities were enlarged and separated to provide separate facilities for both male and female firefighters. The renovated Kitchen allows for a larger common area and more space to prepare meals and relax between service calls. A new water service and electrical service was brought into the building as part of the renovation.
