

SRP PROJECT of the MONTH

MARY MUNFORD ELEMENTARY SCHOOL

Simmons, Rockecharlie, and Prince recently completed the design for the replacement of the Steam Boiler and Condensate Pump system. A new 60 KW emergency generator was also installed to serve the life safety needs of the school and the Kitchen refrigeration units. The new Boiler system includes two new 3100 MBH Cast Iron Sectional Boilers, a 20 GPM dual pump vacuum and boiler feed system, 2 Vertical sump pumps serving the basement level Boiler room, and new Honeywell DDC controls. A new chemical treatment and water softening system was installed as well. The existing breeching system was removed and a new flue was installed inside the existing chimney to minimize aesthetic affect to the outside of the building.
